PROFESSIONAL PROFILE

ANONYMOUS NEUROSCIENCE CONSULTANTS • Anytown, USA

2007-2011

Physician's Assistant

Orchestrated multiple drug studies, resulting in approval of Imitrex nasal spray in adolescents; studies involved many anti-epileptic medications as add-on or 2nd drugs in pediatric patients with resistant epilepsy. Managed pediatric and adult patients for 9-doctor practice. Led budgeting, public relations, and human resources functions. Approved purchases, advertisements, and contracts. Ensured OSHA compliance.

UNIVERSITY OF AMERICA MEDICAL CENTER • Anytown, USA

2000-2007

Registered Nurse

Functioned as primary care nurse in wide range of clinical settings, such as ambulatory care, pediatric intensive care, medical and surgical units, geriatrics, allergy and immunology, and oncology. Served in variety of interim supervisory roles; cultivated and mentored new hires; provided patient advocacy and ensured top-notch service through implementation of quality care processes and improvements. Received IRB approval for clinical studies; pooled data through national database affiliation for clinical trials and audits.

- Increased patient satisfaction scores significantly through enhancing clinic flow.
- Boosted revenue by implementing solutions to accommodate more patients.
- Increased patient survival rate and reduced medication side effects through ensuring 95% of patients were seen in ambulatory clinics by RNs, thus minimizing RN phone time to allow for enhanced educational opportunities with patients and families.
- Facilitated ambulatory care growth by implementing Lean Processes to accommodate additional patient visits; increased visits requiring additional physicians, which improved revenue and research initiatives 20%.

ANONYMOUS MERCY MEDICAL CENTER • Anytown, USA

1993-2000

Registered Nurse

Served as emergency room staff nurse, charge nurse, and nursing preceptor. Provided quality care for patients with acute illness and/or traumatic injuries. Administered specialized care to premature babies in NICU.

- Saved infant by identifying hole in her intestines after requesting X-ray from physicians; following emergency surgery, infant recovered very well.
- Identified severe infection in young baby, requiring mother to come to ER; baby recovered after 11 days in ER.
